

Know where everything is. All of it.

GPS tracking, AI dashcams and battery asset trackers for Australian fleets, all reporting into one platform. One map, one login, one bill, and an Australian team behind it.

Why fleets do it

THE PROBLEM IT SOLVES

Stop guessing

See every vehicle and asset live instead of ringing around to find out where they are.

Prove the hours

Engine hours and time on site you can bill with confidence, or defend when it is queried.

Get it back

Movement, tamper and power-loss alerts, and a last known position when something walks.

Cut the waste

Idling, after-hours use and fuel that does not match what the card was charged for.

Defend a claim

Footage and data on the incident, so it is not your driver's word against theirs.

Four devices cover almost every job

THE HARDWARE

TK56L

4G OBD GPS Tracker

The plug-in one. Into the OBD port under the dash in about a minute. No wiring and no auto electrician.

Cars, utes, vans, light fleet · self-install

TK900

4G Hardwired GPS Tracker

The hidden one. Wired in out of sight, runs on 9 to 90 volts, with a cut-wire alarm if power is lost.

Trucks, plant, machinery, older vehicles · certified install

TK18P-3CH

3-Channel 4G AI Dashcam

Three cameras and a tracker in one. Road ahead, plus two on cables that go wherever the vehicle needs them.

Trucks, 4WDs, utes, vans, cars · certified install

TKS20 PRO

4G Battery Asset Tracker

The battery one. Nothing to wire, magnetic mount, IP67, and a 7500mAh battery that runs for months.

Trailers, bins, gensets, attachments · self-install

Who runs it

INDUSTRIES

Transport & logistics

Civil & construction

Trades & service

Hire & rental

Agriculture

Councils & utilities

Car dealerships

Waste

Mining

Marine

One platform does the lot

THE SOFTWARE

Live tracking

Every vehicle and asset live on one map, with six months of trip history, speed, stops and idle time behind it.

Geofences & alerts

Draw a yard or a job site and get told the moment something enters, leaves, speeds or moves after hours.

Reports

Trips, engine hours, utilisation, speeding and idling, scheduled straight to an inbox or exported to Excel.

Dashcam video

Footage in the same platform as the tracking. Events upload over 4G, so nobody pulls memory cards.

Fuel & cost

Fills, drops and consumption per vehicle, and the gap between what the card paid for and what went in.

Apps & access

Web, iOS and Android, with permissions so the owner, the office and the driver each see only their part.

You do not run any of it

WHAT WE HANDLE

We set it up, we train your team, we support it.

There is no software to install, host or maintain. We configure the account, build the geofences, set up the reports with you and train the people who have to use it.

- **Platform and hosting.** Nothing to install or maintain.
- **Setup and onboarding.** Configured around your operation.
- **Training.** For the office and the drivers.
- **Australian support.** Real people who know the gear.
- **SIM and data included.** Nothing to arrange.
- **Updates included.** New features arrive on their own.

About TrackNow

WHO YOU ARE DEALING WITH

TrackNow Pty Ltd is an Australian owned technology company delivering GPS fleet management, telematics, asset tracking and workforce intelligence, with head office on the Gold Coast, Queensland.

We cover fleet management, vehicle plant and equipment, asset security, AI safety and driver management, and operational intelligence, from a single ute through to enterprise fleets. The platform behind it is proven at scale worldwide, and the people you deal with are here.
